Two types of TRASSIR video surveillance systems

TRASSIR AnyIP

Professional video surveillance system with remote access and administration, Video Analytics and extensive integration capabilities providing interaction with other systems

TRASSIR EnterpriseIP

Distributed video surveillance system intended for a large number of users, video surveillance servers and video cameras.

Includes all the TRASSIR AnyIP capabilities

TRASSIR EnterpriseIP includes:

**VMS with built-in
video analytics**

Optional:

- 1** Video analytics for security purposes

- 2** Video analytics for business solutions

- 3** Applications developed by TRASSIR and third-party developers

TRASSIR EnterpriseIP video surveillance system includes all the TRASSIR AnyIP features

- Convenient remote access using Web, Desktop and mobile applications;
- Built-in video analytics for security purposes (motion, sabotage, fire and smoke, sound detectors);

- Quick search in the archive using video analytics technologies;
- Deep integration with the functionality of video cameras and ACS;
- The ability to use open HTTP API;
- Convenient system configuration and video cameras management;
- Interactive maps to display room and area plans indicating all video cameras installed;
- Fault-tolerant architecture;
- Automatic monitoring, system and user's actions logging;
- Advanced encryption and data transfer technologies;

Optional video analytics for safety and security for TRASSIR EnterpriseIP

Left Object Detector

Auto TRASSIR

Face Recognition

Neuro Detector

ActiveDome+

And others

Application support in TRASSIR EnterpriseIP video surveillance system

TRASSIR Switch

Monitoring and management of TRASSIR PoE switches

TRASSIR Telegram Bot

Monitoring and management of TRASSIR video cameras and NVR's

TRASSIR ActivePOS Weight

Controlling the weight of products in the FMCG retail

AutoTRASSIR Parking

Keeping records of vehicles and accounting for the time spent in parking lots

TRASSIR Failover

Ensuring video surveillance system operation in emergency situations

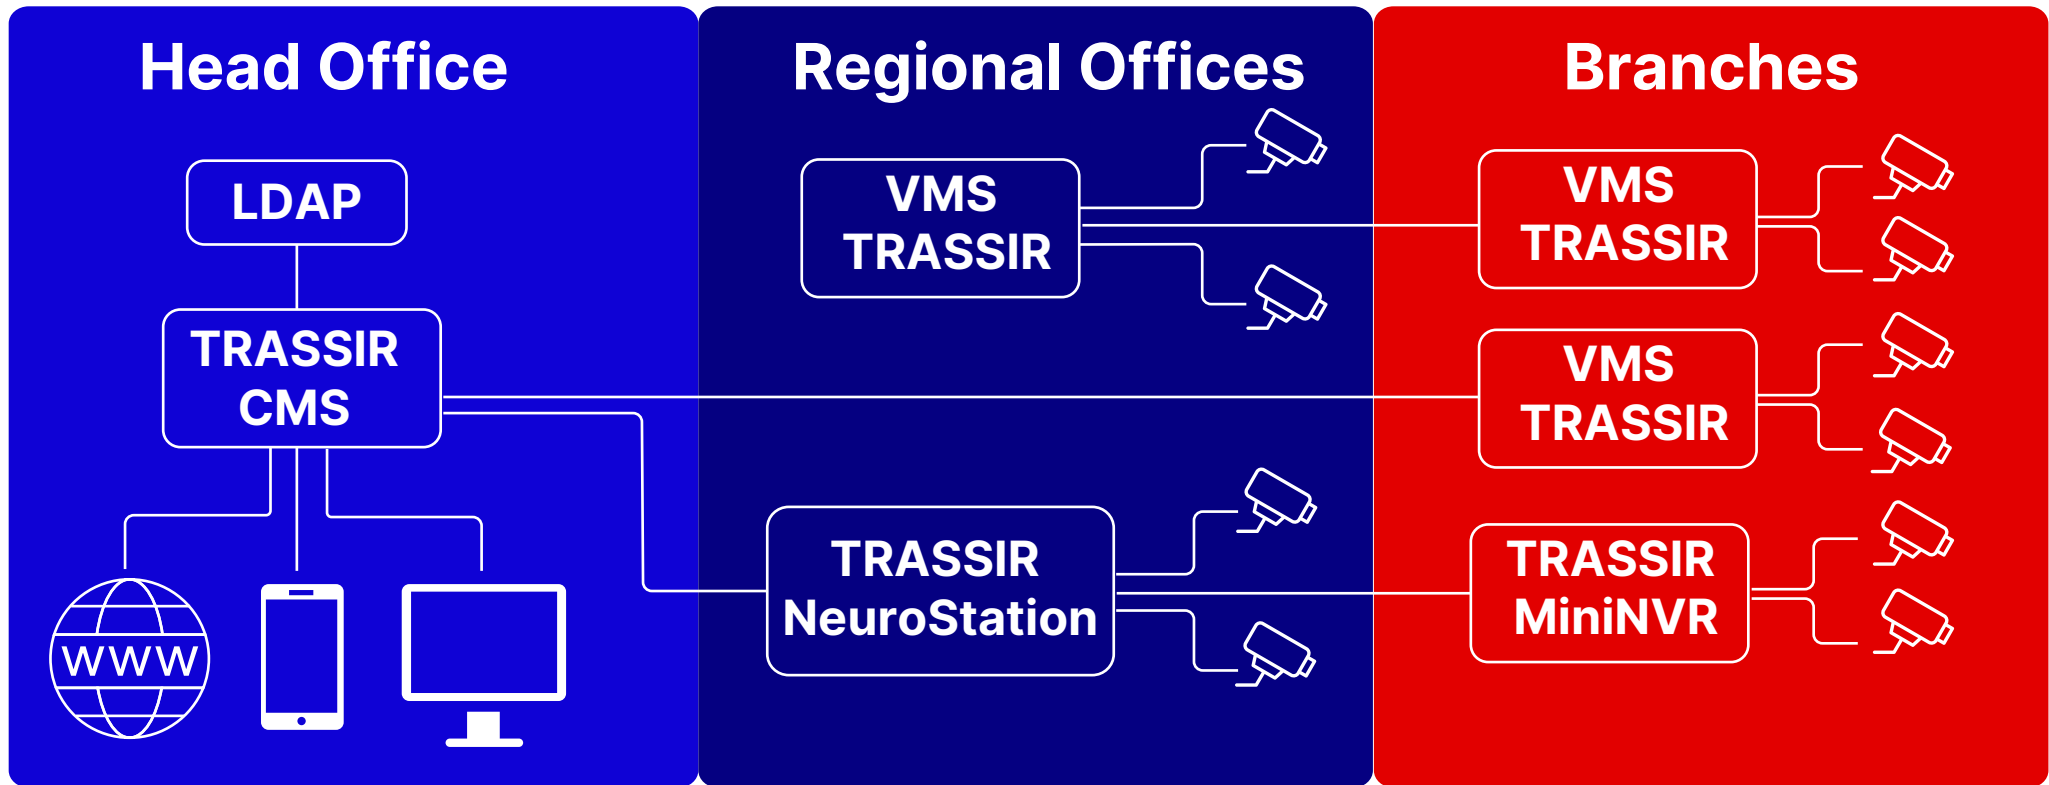

And others

TRASSIR EnterpriseIP Advantages

Scalability of TRASSIR EnterpriseIP video surveillance system

TRASSIR CMS is a central management server in **TRASSIR EnterpriseIP** video surveillance system

TRASSIR CMS (Central Management Server) is a functional server designed for centralized monitoring and control of a large-scale TRASSIR EnterpriseIP video surveillance system

Consolidated video analytics reports in TRASSIR EnterpriseIP video surveillance system

Centralized video analytics data transmission by industry solutions in CMS with access via Web and BI tools allows you to create consolidated reports on:

Speed of resolution of incidents "the queue length is above the acceptable level" in all outlets of the retail chain;

POS-loss amount detected in store chains using TRASSIR ActivePOS;

Monitoring of systems
operation and data
reporting in **TRASSIR
EnterprisEP** video
surveillance system

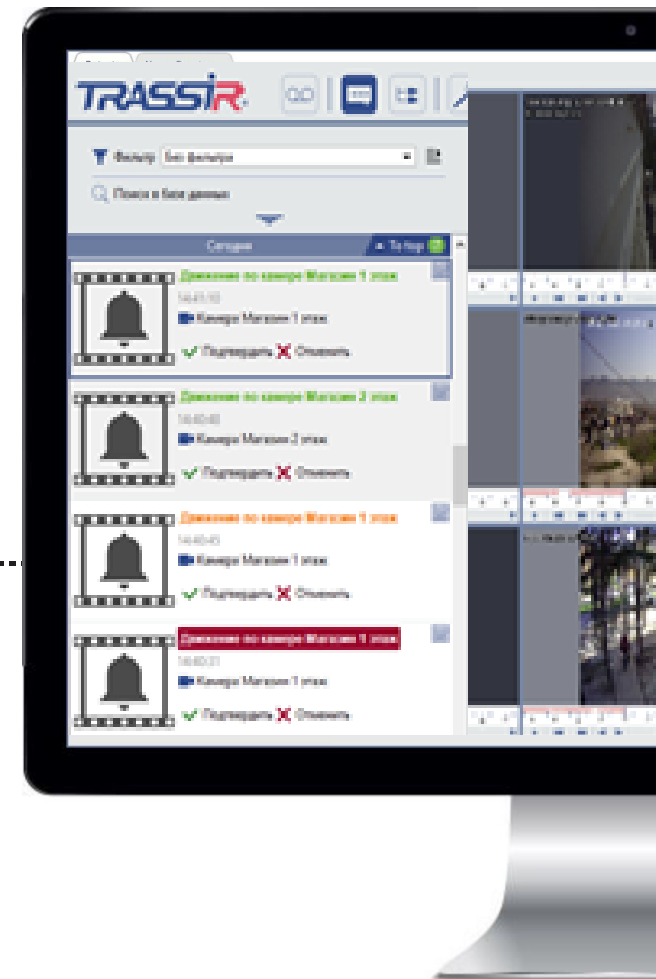

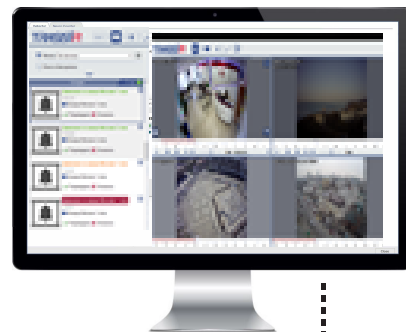

Continuous monitoring of
servers, video cameras and
other elements of video
surveillance system

 System status report
from TRASSIR

 CMS

Alarm distribution functionality in TRASSIR EnterpriseIP video surveillance system (under development)

- Custom alarm generation rules;
- Alarm handling by several operators;
- Alarm classification in order of importance;
- Alarm notification by displaying in context (linked to a camera, map etc.);

TRASSIR Client and TRASSIR Server for TRASSIR EnterpriseIP video surveillance system

- Linux - Server, Client
- Web (inCMS) - Client
- Windows - Server, Client
- TRASSIR OS - Server, Client
- iOS - Client
- Android - Client
- MacOS - Client

Centralized licensing over network
in TRASSIR EnterpriseIP video
surveillance system

TRASSIR License Station
One device handles the licenses for all TRASSIR
servers (Linux) EnterpriseIP on a network

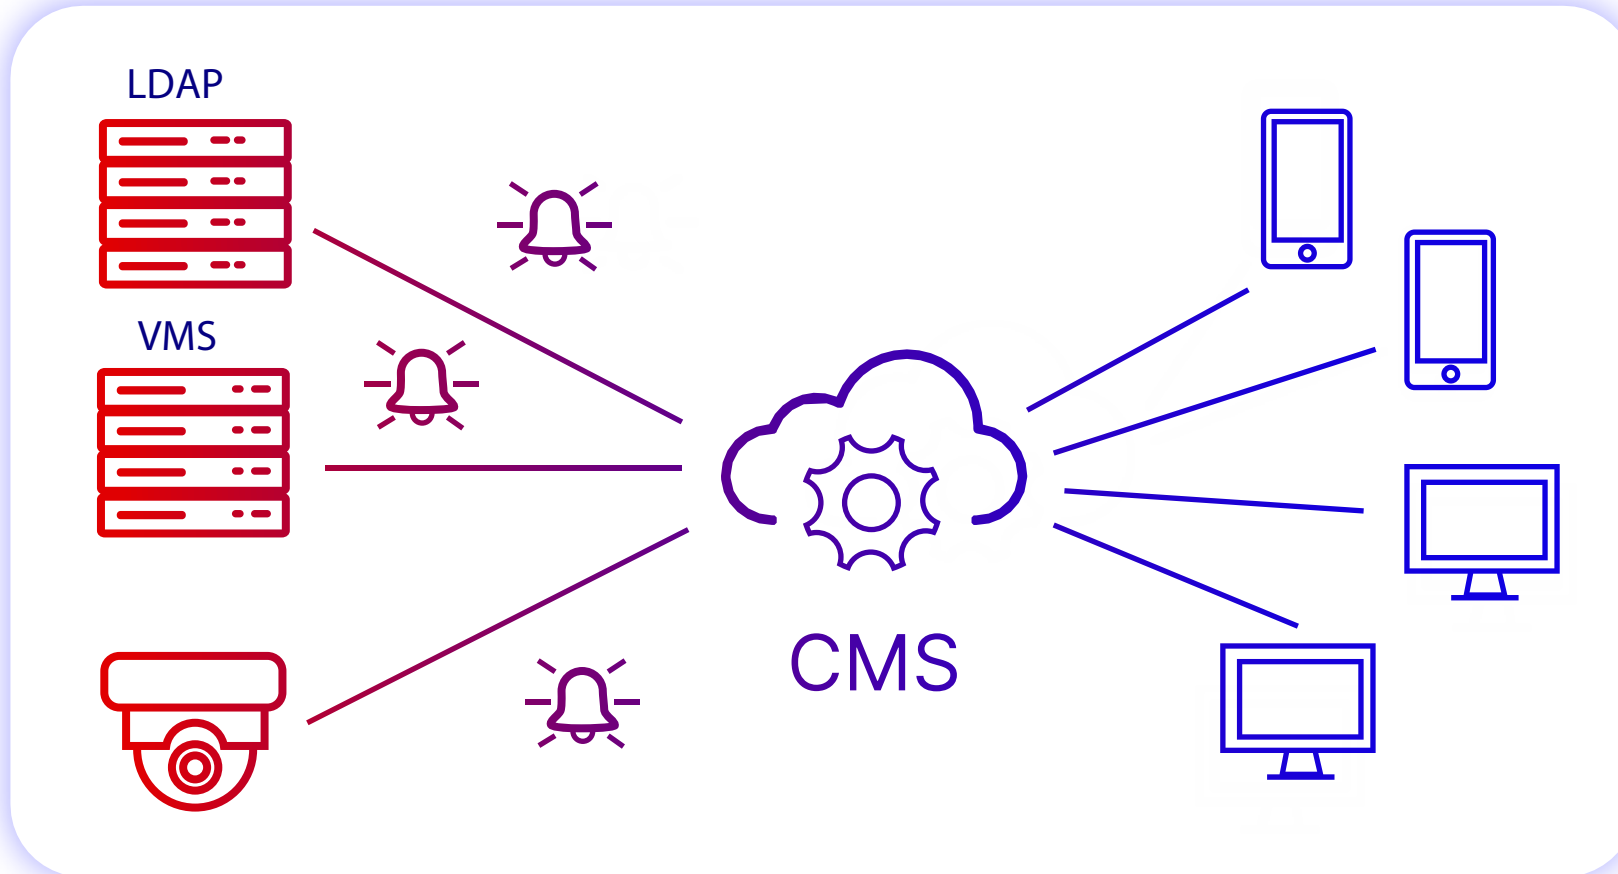

**Virtualization support
and enhanced reliability
of TRASSIR EnterpriseIP
video surveillance system**

Using local network licensing enables automatic migration of a virtual machine between physical servers in the event of a failure.

Such approach provides increased fault tolerance of the video surveillance system.

Single sign-on and account data for all users in the TRASSIR EnterprisIP video surveillance system

Centralized presets
management in the
TRASSIR EnterpriseIP video
surveillance system

Saving and restoring backup copies of settings and license files in TRASSIR EnterpriseIP video surveillance system

TRASSIR CMS automatically backs up settings and licenses files that can be restored in the future.

Update management in TRASSIR EnterpriseIP video surveillance system

Automatic update with the ability to selectively update certain servers.

TRASSIR EnterpriseIP advantages: summary

1

Remote access using TRASSIR Client application for Linux;

2

Server-based TRASSIR Server application for Linux x64;

3

Unique Web-interface of video surveillance in TRASSIR CMS;

4

The system of alarm distribution among operators;

TRASSIR EnterpriseIP advantages: summary

5

Centralized authorization support and connecting users, access right management, integration with corporate user directory (LDAP).

6

Consolidation of reports from TRASSIR business video analytics;

7

Increased fault-tolerance due to centralized monitoring of system operation, virtualization support, centralized licensing over the network, update management;

TRASSIR Enterprise Station is a ready-made hardware and software solution (under development)

- Fault-tolerant hardware and software TRASSIR EnterpriseIP video surveillance system solution;
- Linux TRASSIR daemon x64.
